LANGUAGES: English (Advanced), Portuguese (Native)

Full-stack developer with experience in web development. Front-end specialist in JavaScript, React, and back-end with Python, C#, Django, .Net and Node.js. Experience in creating scalable applications, integrating RESTful APIs and modeling SQL databases. Passionate about developing technological solutions that generate an impact on people's lives.

EXPERIENCE

IT Coordinator - Django (April 2023 - November 2024)

Amapatec

- Conducted a detailed analysis of existing infrastructure to identify performance bottlenecks. Implemented database optimizations and reconfigured servers for greater efficiency.
- Developed and implemented automated systems to digitize manual processes. Provided training to teams on adopting new tools, reducing rework and eliminating redundancies in internal workflows.
- Developed web and CMS platforms using Django, improving user experience and functionality.

Full Stack Developer - CEO (May 2023 - Present)

Devlink

- I developed the Devlink platform using Django and Postgres, creating a scalable and secure infrastructure.
- Created the proprietary algorithm that calculates the amount of carbon emitted by software development and offsets it correctly.
- Founder and responsible for the strategic vision and execution of Devlink, an innovative marketplace connecting developers to software demands.
- I integrated AI solutions to optimize the matchmaking process between developers and projects, reducing response time using the Gemini API.

Data Analyst - GCP (May 2023 - April 2024)

Orbita Technology

- Analyzed data for database and chatbot connections, improving data accuracy and reliability.
- Created SQL queries for data filtering and retrieval, speeding up data access.
- Updated chatbot algorithms to incorporate machine learning, increasing the efficiency of user interaction using Dialogflow and custom scripts.

Back-end Developer - C# (September 2021 - March 2023)

Owera

- Applied system updates to optimize internal processes.
- Developed new features using ASP.NET MVC 5 to improve the client's final product.

CTO - C# (January 2022 - September 2022)

Meta Carbon

- I coordinated the technology sector to develop a system to follow the carbon credit business model.
- I conducted in-depth studies on carbon offsetting and credits, integrating them into the system I developed in a marketplace format, facilitating the trading of assets and increasing market engagement.

LATEST PROJECTS

Versacord Framework

Modern framework developed in Python for creating bots on Discord. It offers several functions that allow you to create customized and dynamic bots for different purposes.

[Repositório GitHub](#)

Time Tracker & View (Extension for VS Code)

Extension that allows you to monitor the time spent on projects directly in the development environment. Includes features to track and view usage history.

[Repositório GitHub](#)

StoryForge

Framework for creating and interacting with interactive stories. Users can make decisions that alter the course of the narrative, providing a personalized and engaging experience.

EDUCATION

Undergraduate in Artificial Intelligence Technology

Unama (Macapá, Brazil)

2021 - 2025

Computer Technician

Senai (Macapá, Brazil)

2017 - 2019

TECHNOLOGIES AND LANGUAGES

- **Languages:** C#, Python, JavaScript, Node.js, TypeScript
- **APIs and Integrations:** RESTful APIs, Open Finance, Twilio, WhatsApp, Google APIs
- **Databases:** PostgreSQL, MySQL, MongoDB
- **CI/CD and DevOps:** Git, GitHub, Docker, AWS, GCP, Firebase, Linode
- **Frameworks:** .NET, Django, Flask, React.js, Bootstrap 5, VUE.js
- **Others:** SCRUM, KANBAN, Unit Tests, Data Structures, Technical Documentation
